SUMMARY

Backend-focused full-stack developer with production experience shipping scalable REST APIs and backend services using Node.js, Express.js, and PostgreSQL, including role-based access control (RBAC) and authentication for real-world platforms. Strong in relational data modeling with Sequelize, with hands-on Redis caching and rate limiting, and comfortable containerizing services with Docker and Docker Compose. Also builds React/Next.js front-ends for full-stack delivery, with a solid foundation in Git-based Agile workflows and cross-functional collaboration.

EXPERIENCE

Junior Software Engineer – Blockcube (Full Time)

October 2025 – June 2026

- Delivered scalable REST APIs for the Urjamitra solar energy ops platform (Node.js, Express, PostgreSQL), modeling ~50 entities and supporting 15 lead-to-install pipeline stages with optimized queries for high-frequency lead, KYC, and payment updates.
- Built React dashboards with seamless API integration and WebSocket real-time updates, powering MIS/performance views across 70+ screens so ops and managers could track sales and fulfillment without manual refreshes.
- Maintained and extended RBAC across 6+ roles (Urja Mitra, managers, dark-store, installation partners, channel partners, admins), wiring JWT auth and hierarchical permissions into 20+ API modules and gated frontend features.
- Shipped backend features in an Agile Git workflow (PRs, code reviews), contributing to a production service with 100+ DB migrations and integrations for payments (Razorpay/ICICI), S3 documents, and external P2P sync.

Full-Stack Developer – RegalRinse (Internship)

Jul 2025 – Sep 2025

- Architected and deployed a full-stack e-commerce platform using React, Node.js, TypeScript, Redux, Tailwind CSS, and MongoDB, with 20+ responsive routes covering shop, cart, checkout, search, and category/brand browsing.
- Integrated Razorpay and COD for secure real-time checkout with payment verification, and built an admin dashboard for analytics, catalog management, coupons, and 6-stage order tracking (Pending → Delivered).

PROJECTS

[URL SHORTENER](#) – Full-Stack Link Shortening Service

Tech Stack: React · Vite · Node.js · Express.js · PostgreSQL · Sequelize · Redis · Axios · Tailwind CSS · Docker

- Built a full-stack URL shortener with REST APIs to create, list, fetch, and delete short links and redirect each short code to its original URL, storing URLs and visit counts in PostgreSQL with Sequelize.
- Cached short-code lookups in Redis for 24 hours and cleared the cache on delete, cutting repeat redirect responses to about 5 ms from about 11–20 ms on a Postgres read, while still recording every click in the database.
- Added Redis-backed rate limits of 10 URL creates and 100 redirects per minute per IP, and a React dashboard with Axios to shorten, copy, and delete links and view click statistics.

[ATTENDANCE MANAGEMENT SYSTEM](#) – Full-Stack Role-Based Attendance Platform

Tech Stack: React · Vite · Node.js · Express.js · PostgreSQL · Sequelize · Redux Toolkit · React Query · Tailwind CSS · JWT · Render · Vercel · [Swagger Documentation](#)

- Built a full-stack, role-based attendance platform with JWT authentication and permission-based authorization across Admin, Teacher, and Student roles, exposing 37 REST API endpoints and 27 granular permissions.
- Designed session-based attendance tracking with present/absent/late status, enabling teachers to record and update attendance and students to monitor real-time attendance rates.
- Developed analytics dashboards and filterable reports (by class, student, session, and date range) using React Query for server-state management and Sequelize for relational data modeling.

[EXPENSE TRACKER](#) – Full-Stack Personal Finance Platform

Tech Stack: PostgreSQL · Express · React · Node.js · Sequelize · Tailwind CSS · JWT · Neon · Render · Vercel

- Established a full-stack expense management platform with Sequelize and PostgreSQL, featuring JWT authentication, budgets, categories, and CRUD operations, plus an automated bank CSV import pipeline with categorization and duplicate-detection logic.
- Optimized dashboard analytics and month/year filtering with report views over relational data models to surface spending insights.

PROGRAMMING SKILLS

- Languages:** JavaScript, TypeScript, Python, SQL
- Frontend:** React.js, Next.js, Redux, HTML, CSS, Tailwind CSS, Shadcn/UI
- Backend:** Node.js, Express.js, REST APIs, JWT Authentication, RBAC
- Databases:** MongoDB, PostgreSQL, Redis, Sequelize
- Infrastructure & DevOps:** Docker, Docker Compose, Render, Vercel, Neon, Upstash
- Tools & Platforms:** Git, GitHub, VS Code, Postman, JIRA, Agile/Scrum, Razorpay, Vite
- DSA / Problem Solving:** Solved 150+ Data Structures & Algorithms problems on [LeetCode]

EDUCATION

Guru Gobind Singh Indraprastha University

Bachelor of Technology in Computer Science (Currently in 7th semester) | CGPA: 8.77

New Delhi, Delhi

Aug 2023 - Sep 2027
